ABOUT ME

DevOps Engineer with 2+ years of experience designing and optimizing CI/CD pipelines, complemented by 2 years of experience as an Operations Executive. Skilled in building CI/CD pipelines with Jenkins and automating infrastructure through Terraform and Ansible. Proficient in monitoring system performance using Prometheus and Grafana. Experienced in building and maintaining secure, scalable infrastructure on AWS, including EC2, VPC, ELB, S3, IAM, and Auto Scaling. Possesses foundational knowledge of Bash scripting. My Operations background brings a strong business-first perspective, enabling me to align technical decisions with organizational outcomes. Actively seeking a DevOps Engineering role where I can contribute meaningfully and continue to grow.

EDUCATION

Yogi vemana University
2017 - 2021

Bachelor Of Science In Computers

WORK EXPERIENCE

DEVOPS ENGINEER - INDIES TECHNOLOGIES PVT. LTD. , BENGALURU, IN

MAR'24 - PRESENT

- Built and maintained CI/CD pipelines in Jenkins, wiring in Maven for builds, SonarQube for code analysis, and Nexus for artifact storage cut down manual deployment work and sped up releases.
- Automated deployments to Tomcat across dev, staging, and prod, so releases became repeatable and far less error prone.
- Managed Git/GitHub workflows branching strategy, PR reviews, merge policies, version tagging to keep multiple teams working together without stepping on each other.
- Containerized apps with Docker and moved orchestration to Kubernetes, which made scaling and deployments a lot more flexible and efficient.
- Added quality gates in SonarQube to catch bugs, vulnerabilities, and code smells before they hit production, cutting down on post-release firefighting.
- Set up Prometheus and Grafana for monitoring and alerting, giving the team visibility into system health and letting us catch problems before users did.

OPERATION EXECUTIVE - GAMUTGURUS PVT. LTD. , BENGALURU, KA

MAR'22 - FEB'24

- Managed and optimized enterprise e-learning platforms (GoTo Webinar, Google Classroom, Zoom) to deliver seamless virtual learning for diverse user groups.
- Administered full platform lifecycle configuration, user onboarding, access control, and troubleshooting ensuring zero disruption service availability.
- Coordinated cross-functional teams (academic, technical, administrative) to deliver online programs and training sessions on schedule.
- Monitored platform performance and produced analytical reports to drive operational improvements and resource planning.
- Acted as primary escalation point for platform issues and developed SOPs, reducing new-hire onboarding time and improving stakeholder satisfaction.

TECHNICAL PROFICIENCIES

- **Cloud Platform:** AWS (EC2, VPC, ELB, S3, IAM, and Auto Scaling)
- **CI/CD & Automation:** Jenkins, Maven, SonarQube, Nexus, Tomcat
- **Containerization/Orchestration:** Docker, Kubernetes
- **Infrastructure as Code:** Terraform (Modules, Workspace, State Management)
- **Configuration Management & Scripting:** Ansible, Shell Scripting (Bash)
- **Monitoring & Observability:** Prometheus, Grafana
- **Version Control & Project Management:** GIT, GitHub, Jira
- **Operating System:** RedHat Linux, Ubuntu

KEY PROJECTS

Secure End-to-End CI/CD & Deployment Automation Framework

- Built an end-to-end CI/CD pipeline enabling automated build, test, and deployment from commit to production with zero manual intervention.
- Integrated SonarQube for early vulnerability scanning and Docker for containerized deployment, with automatic rollback on production failures detected via Prometheus/Grafana.
- Reduced release time and production incidents by shifting security checks earlier in the development cycle.

End-to-End DevOps Automation for E-Learning Application Deployment

- Built and owned the DevOps pipeline for an e-learning platform supporting online courses, live classes, and certifications enabling the team to ship new features faster without breaking things for students, teachers, or admins.
- Focused on making deployments boring (in the best way) reliable, repeatable, and scalable, so the platform could grow without the infrastructure becoming a bottleneck.

KEY ACHIEVEMENTS

- Successfully transitioned from Operations Management to DevOps & Cloud Engineering through self-driven upskilling and hands-on AWS project experience.
- Delivered end-to-end Jenkins CI/CD pipeline implementations, improving deployment frequency and significantly reducing manual errors in release workflows.
- Provisioned and managed scalable AWS infrastructure (EC2, VPC, ELB, S3, IAM, Auto Scaling) supporting reliable production-grade environments.
- Built and maintained containerized infrastructure using Kubernetes, improving application portability and reducing environment inconsistencies.
- Implemented Infrastructure as Code using Terraform and Ansible across AWS environments, reducing provisioning time and ensuring configuration consistency.
- Managed e-learning operations for hundreds of concurrent users across multiple platforms with zero major service disruptions throughout tenure.
